

Instructions to run (must use a computer with a linux-based OS, eg OSX)

1. Follow this tutorial (only install node, npm, and mongo)!: https://github.com/rorikata/tutorial_MEAN/blob/master/MEAN_installation/README.md
2. In client folder, first write following command "npm install" and "npm install dev"
3. In jwt folder, first write following command "npm install"
4. Then in client, run by "npm run dev" and for jwt, run by "npm start"
5. You will need to add at least 1 new category, 1 subcategory, and 42 questions to the database before running the game, which can be done in the home tab and add question tab.
6. In the game page, you need to reload the page every time before starting the game.
